

• COMPOSTING PROVIDED BY RITE ENVIRONMENTAL •

WHAT CAN I COMPOST?

NAPKINS

Napkins are good for the fungus that help break down your left over food

FRUITS AND VEGETABLES

Fruits and vegetables are just as good for growing plants as they are for you!

BREAD, MEAT, AND DAIRY PRODUCTS

Unlike in backyard composting, professional facilities have the means to process uneaten meat and dairy safely.

OTHER PAPER PRODUCTS

A lot of paper products have plastic coatings, which can't be composted

ALL PLASTIC

Plastic isn't good for plants. Please separate any packaging from food before composting it!

ALL METALS

Just like plastic, metals cannot be used to nourish plants
